

MoU for RDF plant signed

LAHORE, Sept 13: Lafarge Industrial Ecology on Friday announced its intent to collaborate with Saif Holdings for manufacturing of refuse derived fuel (RDF) from combustible inorganic fractions of raw municipal solid waste to be used as an alternate fuel.

The agreement was signed after conducting feasibility study for development, installation and commissioning of an RDF manufacturing plant.

Amr Reda, Lafarge Pak-

istan Chief Executive Officer, stated, "By combining the technical innovation of Lafarge Industrial Ecology experts with solid business acumen of Saif Holdings, we will provide an environment-friendly method of scientific disposal and recovery of waste."

Salim Saifullah Khan, Saif Group director, said, "We are proud to partner with Lafarge Group and we want to turn waste products into resources,

instead of burying them in landfill sites or incinerating the waste and hurting our precious environment."

Lafarge provides its experts with advanced training in the co-processing and other relevant industrial ecology processes.

Lafarge Pakistan Cement owns and operates a state-of-the-art cement plant at Kallar Kahar with an annual production capacity of 2.4 million tonnes.—Staff Reporter
